CLOUD VIRTUAL INTERNSHIP

Internship Presentation

Student Name

Rahul Soni

Roll Number

2410030962

Program & Semester

B.Tech CSE • 5th Semester

Organization

EduSkills Foundation

Internship Details

Duration: 8 Weeks

Period: April-June 2026

Curriculum: AWS Academy

Academic Year: 2026-27

Internship Overview

01

What was the internship?

An eight-week virtual learning programme focused on cloud computing and Amazon Web Services (AWS), completed through EduSkills Foundation during April–June 2026.

Learning progression

The curriculum moved from cloud fundamentals to AWS architecture, security, monitoring, scalability, high availability and certification-oriented preparation.

Cloud Foundations

Weeks 1–4
Cloud concepts • AWS basics •
networking • compute • storage •
databases • monitoring

Cloud Architecting

Weeks 5–8
IAM • KMS • S3 • EC2 • RDS • VPC •
Route 53 • SQS • Lambda

Documented scope

The supplied report describes
academic learning and assessment; it
does not claim deployment on a
production system.

Project Objectives & Scope

02

- Understand the fundamentals of cloud computing and AWS.
- Build foundational knowledge of cloud networking and content delivery.
- Understand compute, storage and database services in cloud environments.
- Study cloud architecture, automatic scaling and monitoring.
- Learn AWS security, high availability, decoupled and serverless concepts.

Scope: Core Services

IAM, KMS, S3, EC2, RDS, VPC, VPC Peering and Route 53.

Scope: Modern Architecture

Elasticity, automatic scaling, monitoring, SQS, Lambda and high availability.

Scope: Advanced Topics

Data engineering patterns, disaster recovery planning and AWS Solutions Architect certification preparation.

Organization & Curriculum

03

EduSkills Foundation

The supplied internship certificate confirms the eight-week Cloud Virtual Internship and identifies EduSkills Foundation as the organization through which the programme was provided.

AWS Academy

The supplied certificate identifies AWS Academy as the curriculum provider for the cloud-focused learning programme.

Technologies & AWS Services Studied

04

Security & Identity

IAM • KMS

Storage

Amazon S3

Compute

Amazon EC2

Database

Amazon RDS

Networking

Amazon VPC • VPC Peering

DNS & Availability

Amazon Route 53

Decoupling

Amazon SQS

Serverless

AWS Lambda

Operational Concepts

Monitoring • Automatic scaling • Elasticity • High availability • Disaster recovery

Learning Integration

AWS services were studied as interconnected building blocks of cloud architecture.

Conceptual AWS Cloud Architecture

05

Conceptual view

This architecture connects the major AWS topics studied during the internship. It is not presented as a record of a specific production system.

Week-wise Methodology

06

Week	Module	Focus / Learning
1	Cloud Foundations	Cloud concepts, economics & billing, AWS global infrastructure
2	Cloud Foundations	Security, networking & content delivery
3	Cloud Foundations	Compute, storage, databases & architecture fundamentals
4	Cloud Foundations	Automatic scaling & monitoring
5	Cloud Architecting	IAM, S3, EC2, RDS, VPC & VPC peering
6	Cloud Architecting	KMS, monitoring, elasticity, high availability & Route 53
7	Cloud Architecting	SQS-based decoupling & serverless microservices with Lambda
8	Cloud Architecting	Data engineering, disaster recovery & certification preparation

Learning Outcomes

07

Cloud Fundamentals

Explain core cloud computing and AWS concepts.

AWS Services

Relate networking, compute, storage and database services.

Security

Understand IAM, KMS and secure access concepts.

Scalability

Understand monitoring, automatic scaling and elasticity.

Architecture

Connect AWS services into broader cloud architecture.

Modern Patterns

Recognize decoupled and serverless approaches.

Resilience

Understand high availability and disaster recovery planning.

Career Readiness

Build a foundation for continued AWS learning and certification preparation.

Certificates & Documentary Proof

Conclusion & References

09

Conclusion

The Cloud Virtual Internship provided a structured foundation in AWS and cloud architecture. The learning progressed from fundamentals to security, scalability, availability, decoupling, serverless concepts and certification preparation.

Overall Takeaway

The internship helped connect individual AWS services with broader requirements of cloud architecture and operational management.
